# k-DISCount demo

k-DISCount: Counting in Large Image Collections with Detector-based Importance Sampling.

This demo uses the detector counts and screened counts from [1](https://www.biorxiv.org/content/10.1101/2022.10.28.513761v1) for radar station KBUF 2010.

```
In [2]: # Load ground-truth counts
with open('KBUF_2010_ground_truth_counts.csv', 'r') as file:
    f = list(csv.reader(file))[0]
    f = [float(i) for i in f]

# Load detector counts
with open('KBUF_2010_detector_counts.csv', 'r') as file:
    g = list(csv.reader(file))[0]
    g = [float(i) for i in g]
```

## Initialize estimator

```
In [3]: # Create k-DISCount object
estimator = kDISCount(g)

# Get samples from estimator
samples = estimator.sample(n=30) # Returns list with indices (in g) of samples to be screened.
                                # Ideally these will go to a screening/verification UI.

# For this demo we will retrieve ground-truth from f
screened_samples = [f[i] for i in samples]

# Load screened samples to estimator
estimator.load(screened_samples)
```

## Define regions

```
In [4]: # Single region with all elements (DISCount--total count)
regions1 = [[i for i, _ in enumerate(g)]]

# len(g) regions of single elements (cumulative counts per day)
regions2 = [[j for j in range(i+1)] for i, _ in enumerate(g)]

# Cumulative counts per quarter
regions3 = [[i for i in range(0, len(g)//4)],
            [i for i in range(len(g)//4, len(g)//4*2)],
            [i for i in range(len(g)//4, len(g)//4*3)],
            [i for i in range(len(g)//4, len(g)//4*4)]]
```

## k-DISCount for total count (DISCount)

```
In [5]: F_hat, CI = estimator.estimate(regions1)
_, CI_all = estimator.estimate(regions1, ci_all_samples=True)

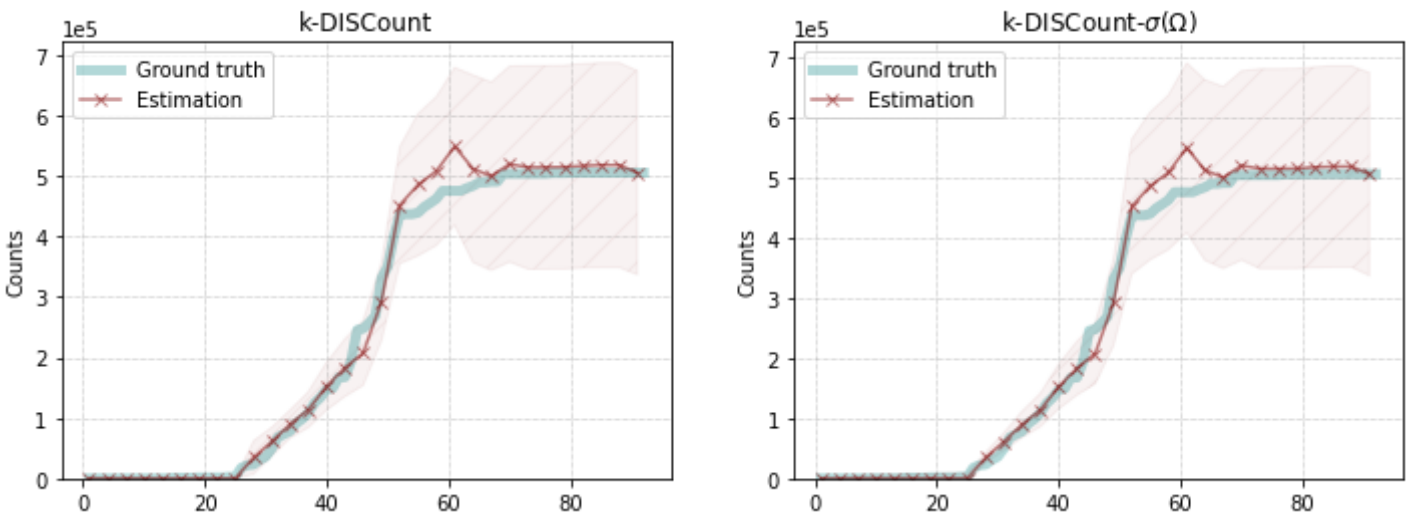

print('Ground truth: %.3e'%sum(f))
print('k-DISCount: %.3e %s %.3e'%(F_hat[0], u'\u00B1', CI[0]))
print('k-DISCount-σ(Ω)$: %.3e %s %.3e'%(F_hat[0], u'\u00B1', CI_all[0]))

Ground truth: 5.056e+05
k-DISCount: 5.054e+05 ± 1.686e+05
k-DISCount-σ(Ω)$: 5.054e+05 ± 1.686e+05
```

## k-DISCount for cumulative counts per-day

```
In [6]: F_hat, CI = estimator.estimate(regions2)
_, CI_all = estimator.estimate(regions2, ci_all_samples=True)

plt.rcParams['figure.figsize'] = [12, 4]
plt.subplot(121)
plot_line(np.cumsum(f), F_hat, CI, title='k-DISCount')
plt.subplot(122)
plot_line(np.cumsum(f), F_hat, CI_all, title='k-DISCount- $\sigma(\Omega)$ ')
```

*k*-DISCount for cumulative counts per quarter

```
In [7]: F_hat, CI = estimator.estimate(regions3)
_, CI_all = estimator.estimate(regions3, ci_all_samples=True)

F = [sum([f[i] for i in region]) for region in regions3]
plt.rcParams['figure.figsize'] = [12, 4]
plt.subplot(121)
plot_bar(F, F_hat, CI, title='k-DISCount')
plt.subplot(122)
plot_bar(F, F_hat, CI_all, title='k-DISCount- $\sigma(\Omega)$ ')
```
